**STRONG PRODUCTS GROUP'S CONNECTRAC SYSTEM
RECEIVES TFM 2006 BEST OF SHOW AWARD**

***Low-Profile Electrical Connectivity Solution Recognized in
Interior Furnishings Category***

Dallas – April XX, 2006 – Strong Products Group, Ltd., was one of seven companies to receive a “TFM 2006 Best of Show Award” and was recognized in the “Interior Furnishings/Space Planning” category for its floor-mounted, electrical raceway systems – connectrac™ – featured at the 2006 Total Facility Management Show in Chicago, April 10 -11.

The connectrac systems accommodate power and voice/data cabling without core-drilling, trenching, raised floor systems or power poles. The systems are extremely flexible and have a sleek, low profile which is unobtrusive and meets ADA requirements.

The TFM Best of Show competition identifies products as top choices in their field and is judged by a panel of leading facility management executives. The judging criteria included the product's application, innovation, ability to meet the needs of the facility management market, presentation at the booth and supporting literature, as well as whether the judges would buy the product based on their experience at the booth.

“We are honored to receive a TFM 2006 Best of Show Award from one of the top facility management organizations,” said Clint Strong, connectrac designer, and founder and managing partner of Strong Products Group. “This award is testament to the innovative, electrical connectivity solution that connectrac provides, improving the flexibility and aesthetic appeal of workplace interiors. Since launching connectrac a year ago, we have received positive feedback from facility managers, architects and designers alike, regarding the system's infinite applications. We look forward to building on this achievement throughout the year as we continue to roll out product enhancements.”

- more -

A 2005 NeoCon Silver award-winner, the connect**trac** floor-raceway system (U.S. Patent # 6,566,598 and # 6,844,493) consists of a shallow track with a removable aluminum cap, forming a rectangular conduit to encase electrical wires. This low-rise conduit is supported by low-sloping ramps along each side that are placed underneath the existing carpeting, causing only a small, gradual rise in the floor surface and providing ADA compliance.

The floor covering in the room (typically broadloom carpet or carpet tiles) extends up over the ramps and seamlessly integrates with the aluminum raceway cap. The end result is an economical and unobtrusive means for users to have connectivity when and where it is needed.

connect**trac** systems can be quickly and easily installed to match any workplace environment, and can also be rearranged and reused, making them ideal for permanent or temporary work space applications.

Further connect**trac** product offerings will be introduced at the NeoCon Show in June and throughout 2006.

Interested architects, interior designers, electrical engineers, building owners and facility managers may order technical specifications, price lists and samples from Strong Products Group.

Strong Products Group, Ltd., based in Dallas, is a privately owned company founded by Clint Strong that develops, manufactures and markets floor-mounted electrical raceway systems under the registered name connect**trac**[™]. The connect**trac** system is available through www.connectrac.com or by calling 1-877-480-5637.
